Introduction

In today's digital world, having proper digital literacy skills is essential for students to communicate, collaborate, and build a professional identity online. As part of this project, I took on the role of a Student Digital Ambassador to understand and demonstrate key digital skills. This project involved creating a digital literacy awareness infographic, building a professional online portfolio, exploring coding and collaboration platforms, understanding email etiquette, and studying cybercrime awareness.

All tasks were organized in a structured GitHub repository, making it easier to present and access the work. This project helped me understand the importance of responsible digital behavior, professional communication, and online safety, which are crucial for both academic and career growth.

Task 1 – Digital Literacy Infographic

For this task, I created a digital literacy awareness infographic using **Canva**, which is a user-friendly online design tool. The infographic focuses on key topics such as the importance of digital literacy, safe internet practices, and maintaining a professional online presence.

The design includes visual elements like icons, short descriptions, and structured sections to make the information easy to understand for students. I ensured that the content was clear, concise, and visually appealing so that it could effectively educate my peers.

The final infographic is included in my GitHub repository under:
`task-1-presentation/`

One challenge I faced while creating the infographic was selecting the right layout and balancing text with visuals. However, this helped me learn how to present information more effectively. Overall, this task improved my creativity and understanding of how to communicate important concepts visually.

Task 2 – Digital Portfolio

In this task, I created and updated my professional presence on platforms such as **GitHub**, **LinkedIn**, and **Kaggle**. These platforms are widely used by students and professionals to showcase their skills and connect with opportunities.

On GitHub, I created a profile README and organized all my project work in a structured repository:
https://github.com/MohithReddy081/Digital-Literacy-Project

On LinkedIn, I updated my education details, including my degree and institution, to make my profile more professional.

Screenshots of all profiles are available in:
`task-2-portfolio/`

These platforms will be very useful in the future for showcasing my projects, connecting with professionals, and applying for internships. Over the next four years, I plan to regularly update my profiles with new skills, certifications, and projects to build a strong digital portfolio.

Task 3 – Coding & Collaboration Platforms

For this task, I explored both coding practice platforms and collaboration tools. I created an account on **HackerRank** and completed a beginner-level challenge, which helped me understand basic problem-solving and coding logic.

The screenshot of my completed challenge is included in:
`task-3-platforms/`

Additionally, I created a **Google Form** titled "Digital Literacy Awareness Quiz" with five questions to test students' knowledge. This form can be used as an interactive learning tool.

Google Form link (included in README):
https://forms.gle/p2hMLt9QQ5fbF63V7

Screenshots of the form and responses are stored in:
`task-3-platforms/`

This task helped me understand how online platforms can be used for both learning and collaboration. These tools will be useful for academic work, surveys, and improving coding skills.

Task 4 – Email Etiquette

In this task, I learned how to write professional emails and understood the importance of proper digital communication. I drafted two emails: one requesting an assignment extension and another applying for an internship opportunity. Both emails followed proper structure, including subject lines, greetings, and formal tone.

I also created a "Do's and Don'ts of Social Media" checklist to promote responsible online behavior. These files are included in:
`task-4-email-etiquette/`

A common issue caused by poor digital communication is sending unclear or informal emails to professors, which can lead to misunderstandings or rejection of requests. This can be avoided by maintaining a polite tone, clear structure, and professionalism. This task helped me improve my communication skills significantly.

Task 5 – Cybercrime Awareness

For this task, I studied cybercrime, specifically focusing on UPI Fraud. I created a case study explaining how such crimes occur and their impact on individuals.

I also developed a prevention checklist with practical tips for students, including safe online practices and UPI security measures. These are available in:
`task-5-cybercrime/`

While researching, I was surprised by how easily people can fall victim to cyber fraud due to lack of awareness. One habit I will change is being more cautious while clicking links and sharing personal information online. This task made me more aware of digital risks and how to stay safe

.

Conclusion

This project helped me develop essential digital literacy skills, including online communication, professional presence, and cybersecurity awareness. By completing all five tasks, I gained practical knowledge about tools and platforms that are useful for students. Organizing everything in a GitHub repository also improved my ability to manage and present digital work. Overall, this project has prepared me to be a responsible digital user and will help me in my academic and professional journey.
